

Case 6572 - Ability to attach documents to kit schemas

1. Add the Ability to attach documents to kit schemas so when kit building you can easily view related documents.

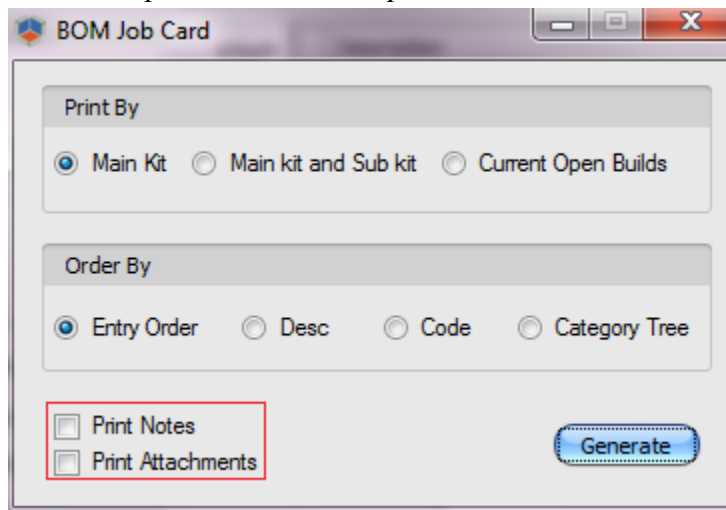

User can view-add-remove any document/note for kit, sub, sub-sub, sub-sub-sub ... kit.

2. Kit build screen. I added a new button "Attach & Notes" and a page with same objects. Notice in notes can be load large text files.

3. Job card report. I added two options to include notes and/or attached doc's.

I have print just attachments on below image.
